Skedule is a desktop software built with C# using the .NET framework. It is designed to provide students with a centralized and organized platform for accessing information and updates related to their classes, homework, quizzes, and other academic activities. Skedule aims to streamline the process of obtaining essential information, eliminating the need to search through multiple platforms and saving valuable time for students.

FEATURES

01

Routine

Skedule's Routine feature organizes daily schedules with subject/course details, time, room number, and teacher's name for easy reference.

02

Announcement

Skedule's Announcements feature allows authorized users to post important updates while students can view and stay informed, but cannot create new announcements.

03

Quiz/Exam

Skedule's Quiz/Exams feature displays sorted upcoming assessments with details like time, room number, and syllabus, helping students stay updated.

04

Assignment

Skedule's Assignments feature conveniently organizes homework and assignments by due dates, allowing students to easily track and prioritize their work.

05

Self-Assessment

Skedule's Self-Assessment feature enables students to track their performance by inputting quiz marks, exam scores, and attendance records on a course-by-course basis.

06

In-built Clock

Skedule's home page/dashboard includes an in-built clock displaying the current time and scheduled class information, serving as a convenient reminder for students to avoid missing any classes.

THANK YOU
